Core Ideas for Business

Our Process

Since 1972, NewKor has continually updated its facilities to offer state-of-the-art manufacturing processes that form and laminate specified materials into superior quality tubes or cores using a spiral winding operation.

Our Products

The NewKor product offering is virtually limitless as we can manufacture any wall thickness, length and inside diameter – each to tolerances of +/- .001?-- for **paper** or **phenolic impregnated cores**.

We offer a wide range of material selections, including:

Kraft Paper
Vulcanized Fiber
Aluminum Foils
Phenolic Impregnated Paper
Custom Colors and Printing

Our Specialty

Our unique **phenolic-impregnated cores** offer added strength and resistance to chemicals and solvents as a result of our proprietary technology for resin saturation.

Finishing

At NewKor, our exceptional capabilities extend to secondary operations – cutting, stamping, drilling, assembly – meaning that we can add finishing touches to our cores, such as notching, labeling, indexing and installing metal, plastic and paper end caps.

Satisfaction

Your finished NewKor product is sure to meet even the most exacting standards for performance by delivering:

- Exceptional Quality
- Low Cost
- High Strength
- Durability
- Lightweight Construction

NewKor, Inc.: Brochure Copy

- Electrical Insulation
- Moisture Resistance
- Chemical, Solvent & Oil Impermeability
- Ease of Integrated Fabrication
- Custom Configurations
